

Citrix & 10ZiG:

Today's Citrix
Experience with 10ZiG®

Citrix's virtualization & application delivery with 10ZiG Citrix-supported secure and managed endpoints is a perfectly combined virtual solution for today's modern standardized experience with easy desktop access, flexible remote work, and secure communications.

From modernized hardware, Linux and Windows IoT operating systems, to leading management and repurposing software - for 20+ years, 10ZiG has offered a diverse range of Citrix-supported virtual-desktop-based solutions developed for seamless integration with Citrix products and services like Citrix Apps and Desktop Virtualization, Citrix DaaS, Citrix Workspace App, and more. Citrix, a staple in the VDI market, has expertly provided virtualization and cloud computing as a way to provide secure access to applications and desktop for decades.

As an original member of the Citrix Partner Program, 10ZiG, with its Single-Vendor approach via Citrix HDX Certified Thin & Zero Clients (Linux & Windows), 10ZiG RepurpOS™ Repurposing Software, the 10ZiG Manager™ Management Software Console, and unmatched Tech Support, has been the thin and zero client endpoint provider of choice for Citrix environments, admins, and users.

Introducing Citrix Virtualization:

Citrix's virtualization and application delivery platforms help organizations access their applications and desktops securely and remotely from anywhere and everywhere with a variety of products and services including DaaS (formerly Citrix Virtual Apps & Desktop service), virtual desktop infrastructure (VDI), Citrix Workspace, and more.

Protect sensitive business information - protect business data from cybersecurity threats with end-to-end Zero Trust security

- Protect expanding attack surfaces by using the Citrix platform to deliver Windows, Linux, Web and SaaS apps
- Provides end-to-end Zero Trust security to protect your business data against the latest cybersecurity threats
- Equips you with the modern security approach you need to keep proprietary data secure, no matter where people work or what devices they use

**Centralize app and desktop management - support distributed workforces
by centralizing management and delivering apps to any device**

- Leverage for both cloud services or IT-managed control as needed, for the best combination of simplified operations and absolute control
- Consolidate policies, security, and deployment for IT while unifying the end-user experience across many different types of applications, infrastructure, and networks
- Move workloads and data between cloud and on premises as the business requires without having to re-architect the solution

Deliver mission critical applications - deliver any resource to any device with the best user experiences

- Leverage for both cloud services or IT-managed control as needed, for the best combination of simplified operations and absolute control
- Consolidate policies, security, and deployment for IT while unifying the end-user experience across many different types of applications, infrastructure, and networks
- Move workloads and data between cloud and on premises as the business requires without having to re-architect the solution

Deliver incredible experiences to users on any device - elevate the user experience when delivering virtual apps and desktops, even over challenging networks

- Citrix HDX elevates the user experience when delivering virtual apps and desktops across public clouds and on-premises platforms, even over challenging networks
- Cutting-edge remoting technologies ensure crystal-clear graphics and video with smooth motion and crisp audio, along with support for a wide array of devices and peripherals
- Unified communications tools like Microsoft Teams perform well as delivered apps, with improved security and management

Introducing 10ZiG Technology Hardware & Software:

10ZiG Technology is a leading Thin & Zero Client hardware and software provider delivering a modernized and secure user experience for VDI, DaaS, SaaS, and Web Apps. With 20+ years in the 'Thin Client endpoint, no-hassle repurposing software, and easy-to-use free management' business, 10ZiG is the best Single-Vendor VDI endpoint strategy equipped with Citrix-supported solutions.

With local support included and a wide range of TAA Compliant options from traditional desktop form factor, Thin Client laptops, and All-In-Ones, along with an array of unique features including Fiber, Wireless support, quad screen, and more, 10ZiG is the secure, managed solution for today's diverse IT requirements. Our ever-growing 10ZiG ecosystem of technology partners helps keep 10ZiG product cutting-edge and flexible by incorporating leading connection brokers just like Citrix.

10ZiG Thin & Zero Clients - Secure, Flexible, Managed Endpoints for Citrix Environments

- 10ZiG Thin & Zero Citrix-Supported and Certified Client Hardware
- Linux and Windows IoT customized endpoint operating systems
- Traditional Desktop, All-in-One (AIO), and Mobile Laptop form factors
- Models to suit all user types, from Task to Power

10ZiG RepurpOS™ - Secure, PC Repurposing for Repurposed Citrix-OS Clients

- Breathe new life to existing Windows PCs, Laptops & Third-Party clients
- Lightweight, secure OS - identical UX as with 10ZiG Thin & Zero Clients
- Save from landfill and turn existing devices into secure, managed endpoints.

10ZiG Manager™ - Simplified, Centralized Management for Citrix-Supported Endpoints

- 100% FREE Cloud Ready Management with an unlimited user license with no subscriptions
- Intuitive automated deployment, management & configuration, scheduled tasks, & role-based access
- Manage Linux and Windows IoT based 10ZiG endpoints via various hardware and repurposed hardware via single pane glass management tool

10ZiG Customer Service - Pre-and-Post Sales Support and Tech Support

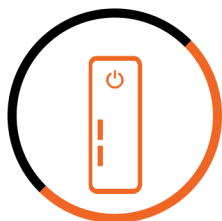

- Sales won't leave you after purchase
- Tech Support available and local to you
- Customer Service 'work until its resolved' mentality
- Responsive and friendly – call, email, or chat – you're not just a case number

Introducing Citrix & 10ZiG

The Citrix OS Experience via 10ZiG - here and now!

Citrix Supported 10ZiG Hardware

10ZiG is best known for being a hardware and software vendor and specifically providing Thin & Zero Clients designed for VDI, Server Based Computing and more recently cloud computing with the likes of DaaS and Cloud-based Workspaces from various solutions including Citrix Cloud and Citrix Workspace. What enables us to be nimble and have the edge on our competition is our in-house R&D team that develops and maintains our Linux and Windows based client OSs, as well as the 10ZiG management platform which is wrapped around the Citrix platform. 10ZiG has a very wide range of hardware to suit all use cases, from task worker to power user - desktop to laptop to AIO - all of these endpoints are built with Citrix in mind, resulting in energy-efficient, lower-powered devices able to support the majority of Citrix HDX features with which 10ZiG and Citrix mutual customers are familiar.

Citrix & 10ZiG for Remote & Hybrid Communications

With the changes of remote and hybrid working, platforms like Microsoft Teams, Cisco Webex, Zoom VDI and other unified communications continue to be on the rise and in demand for new features and updates. 10ZiG is able to offer these functionalities to our customers and work closely with Citrix on its integration and subsequent feedback and ongoing development. These changing platforms are more important than ever to our mutual customers, which look for constant evolution and progress. Citrix have always innovated on the Citrix Workspace App for Linux and Windows, with the HDX stack being very feature rich in both platforms. Linux for example leads for companies such as 10ZiG and other Thin Client or OS vendors, due to the Linux platform featuring a smaller footprint, flexibility and customization options making it perfect for customers who want to deploy based on these advantages, with it being tangible and easily configurable thanks to our inclusive Management tool.

Citrix & 10ZiG for Zero Trust Security

Remote working completely broke down the security perimeter of old, which was essentially the company to which employees and other associated assets connected to. Not just in the sense of the physical office and to where employees commuted to, but also the network security perimeter were used both within and out of the traditional security perimeter for securing access to company assets, including applications, services, and notably data. We continue to see an ongoing boom in companies planning security more strategically via Zero Trust Security. With 10ZiG Citrix supported endpoints and management as the ideal solution for companies that have or are embracing VDI or cloud-based solutions such as Citrix, your endpoint access for zero trust security is covered. 10ZiG Secure Endpoint OS & Secure Management provides employees, whether office or remote, with a secure platform for accessing these same remote desktops and apps securely and remotely, without concerns or risk of other applications and vulnerabilities.
